

1           **ABSTRACT OF THE DISCLOSURE**

2           A push cutting device for a table saw includes seat board  
3           adapted to be mounted on a working table of a base of the table saw, a  
4           slide plate reciprocally slidably mounted on a top face of the seat board  
5           and a slide board reciprocally slidably mounted on a top face of the slide  
6           plate. The seat board, the slide plate and the slide board are  
7           longitudinally slidably mounted to one another relative to the cutting  
8           direction of the table saw such that the cutting stroke of the table saw is  
9           elongated, and the cutting effect and the cutting quality are promoted.
